9/17/93

Dear Mr. Weisberg,

Enclosed are copies of various articles and book reviews that I have recently come across. I am sending them to you because I think they may be of interest to you.

I have a couple of questions and if you could answer them I'd really be grateful.

I would be extremely interested to know your impressions and thoughts on the new book Case Closed.

In the acknowledgements of this book Mr. Posner thanked you for letting him research at your house. I was wondering what you thought of the research techniques he utilized in your presence. Is there any difference in the way Posner indexed the 26 volumes compared with the way Mrs. Meagher indexed the volumes?

Is it at all possible that the first shot was fired at Z frame 160 as Posner claims? I have trouble with that and also with his positioning of Connally in the car when the magic bullet allegedly struck. I'd like to know what you think about that. I haven't read Case Closed yet, but my general impression is that Posner as a lawyer has written a defense brief for The Warren Report just as Mark Lane's Rush to Judgement was a defense brief for Oswald. Do you agree with this assessment?

I was very curious to know what you think of the computer enhancements of the Zapruder film that Posner uses to support his theory. Is the moving of Connally's jacket lapel help support the magic bullet theory? Is there any significance or credence to these computer enhancements? Does this prove anything or teach us anything new?

Lastly, has the new release of files and records brought anything new and significant to the search for the truth?

I hope this letter and material I've sent is not a distraction or imposition to you. I've just come across this and I thought that you would be interested in the articles and clippings.

Best Regards,

Scott Wilson

P.S. Could you please recommend any good books on The Cuban Missile Crisis?
